Cloud Management

SD-LAN builds an application and policy driven wired and wireless access architecture, offering self-organizing and centrally managed networks that are simpler to operate, integrate, and scale. See how to make your network more adaptable, flexible, and cost effective at http://www.aerohive.com/sd-lan

Redefine Your Access Layer

App Optimization

Dynamic optimization that adapts with your applications, network, and business

Identity Driven Policies

Provide secure access to those who should have it and context-based policy control

Self-Organizing Access

Self-organizing, self-correcting, and self-optimizing cooperative control for control without controllers

Enterprise Class SD-LAN Hardware

A new breed of Adaptable Access Points & High Capacity access switches
